PLAUSIBIL — SYNTHETIC BRSR-STYLE TEST REPORT

Environmental Performance Statement — Unit, Boundary and YoY Test

Company: Narmada Components Ltd.
Financial Year: FY2025
Document status: Synthetic test data — not a real corporate disclosure.

Purpose

This document is intentionally formatted like a compact sustainability/BRSR disclosure so that Plausibil can be tested without relying on live web access. Numerical values are synthetic.

Environmental Metrics

Metric	Value	Unit	Reporting basis
Scope 1 GHG emissions	9,800	tCO2e	FY2025 consolidated operations
Scope 2 GHG emissions	4,200	tCO2e	FY2025 consolidated operations
Total GHG emissions	14,000	tCO2e	Scope 1 + Scope 2
Energy consumption	7,500	GWh	FY2025 consolidated operations
Water consumption	150,000	kL	FY2025 consolidated operations
Waste generated	8,200	tonnes	FY2025 consolidated operations
Production output	102,000	tonnes	Manufactured product
Revenue	22,000	■ crore	Annual revenue
Prior-year total GHG	7,200	tCO2e	FY2024 reported value
Prior-year production	100,000	tonnes	FY2024 reported value
Prior-year energy consumption	7,000	MWh	FY2024 reported value

Methodology / Boundary Notes

• FY2025 states that the reporting boundary includes two additional manufacturing facilities.

• FY2024 energy is stated in MWh while FY2025 energy is stated in GWh.

• The unit change may be legitimate, but normalization should convert GWh to MWh before comparing years.

• The boundary expansion may explain part of the year-on-year movement and should be surfaced as a review warning.

Intentional Test Discrepancies

• Expected unit normalization: 7,500 GWh = 7,500,000 MWh.

• Expected YoY total-GHG review: 14,000 vs 7,200 tCO2e.

• Expected boundary-change warning: two facilities added to reporting boundary.

Evidence table

All values above are the source evidence for this synthetic test document. Plausibil should preserve the raw value, raw unit, page number, table reference and source text when extracting them.
